PROFILE

Full Stack Developer with hands-on experience building scalable web applications using **Node.js** and **JavaScript**, AI-powered systems, and real-time applications. Proficient in the complete software development lifecycle — from requirements gathering and system design to implementation, testing, and deployment. Skilled in **React.js**, **REST APIs**, and database management (MySQL, MongoDB, Firebase), with a strong focus on writing clean, maintainable code and optimizing application performance. Experienced in integrating AI tools, cloud-connected services, and real-time workflows to deliver high-quality, user-focused products.

EDUCATION

Indian Institute of Information Technology, Design and Manufacturing <i>Electronics and Communication Engineering</i>	Chennai Nov 2022 – Jun 2026
---	--------------------------------

EXPERIENCE

Product Intern / AI Engineer <i>Replaceable.ai</i> - Designed and implemented AI-driven backend workflows using prompt-engineering techniques, structured reasoning pipelines, and controlled output systems for scalable automation tasks. - Built and optimized developer-focused CMS workflows that accelerated content iteration, improved usability, and streamlined internal productivity processes. - Worked extensively with AI-assisted development tools, APIs, and rapid prototyping workflows to ship features quickly and iterate based on system requirements. - Led end-to-end product development from problem discovery and system architecture to implementation, debugging, and workflow optimization in a fast-paced startup environment.	Nov 2025 – Jan 2026
Intern – Full Stack Development & Sensor Integration <i>Harmonic Aura Project</i> - Integrated 4 biometric sensors (HRV, EEG, GSR, temperature) with ESP32 and Firebase, enabling real-time processing of 500+ data points/minute for chakra analysis. - Built a React.js-based interface that accelerated visualization speed by 30%, allowing users to interact with chakra imbalance data in under 200 ms latency. - Developed and managed RESTful APIs and Firebase data flows, reducing sensor-to-web delay by 40% and ensuring data security and integrity in real-time biofeedback sessions. - Collaborated with cross-functional stakeholders to gather requirements and iterate on UX/UI to deliver a user-friendly interface aligned with product goals.	May 2025 – Jul 2025

PROJECTS

Fit Plate | *AI-Powered Fitness & Nutrition Platform* | [GitHub](#)

- Developed a full-stack fitness platform using **Node.js**, **React.js**, and **MySQL** adopted by 100+ users to track workouts, meals, and body metrics.
- Designed and maintained scalable **RESTful APIs** following clean coding best practices, enabling seamless front-end and back-end communication.
- Designed interactive dashboards with Chart.js, enabling users to monitor calorie intake and macronutrient balance in real time.
- Enabled 70% of users to maintain consistent meal logging for 4+ weeks, improving dietary habit tracking.

Tools: React.js | Node.js | JavaScript | Firebase | MySQL

SKILLS

Languages: Java, C, C++, Python, **JavaScript**
Web Technologies: **Node.js**, **React.js**, **REST APIs**, Tailwind CSS
Databases: **MySQL**, **MongoDB**, Firebase
Cloud & DevOps: AWS, Azure (exposure), Docker (familiar), Git, GitHub
Developer Practices: Code Reviews, Agile Workflows, Debugging & Optimization
